Department of Public  
Health Sciences  
Medical University of  
South Carolina*

## Join a Panel of Global Health Experts Moderated by: John Vena, PhD, Professor

War and armed conflicts are relentless events, producing devastating effects on the wellbeing of populations, especially the vulnerable. War creates conditions that can have detrimental impacts on public health, population health, and global health, and can threaten future advancements in these areas. War is still not considered a priority public health issue, despite the grave effects on populations. This panel will deliberate the public health crisis of war, highlighting case studies from around the world.

Changing What's Possible

Sponsored by Department of Public Health Sciences & MUSC Center for Global Health
